“Grim Reaper ” wet-low noise clay paver blade

One of the biggest problems with clay pavers is the widespread use of small brick saws to cut them with..

Although this hard to cut material requires plenty of muscle only available on petrol powered saws, we have engineered the blade for use with lower h.p. brick saws typically 1.5 h.p.to 3 h.p.(Avail.300 & 350mm)

“Grim Reaper” is a first class blade for the busier paving contractor using typical electric brick saws.

We have used a special bond with carefully selected diamonds, and quietened the blade using laser cuts to the core which upsets blade harmonics. The blade cuts best with 2...5 h.p. masonry saws.

“Grim Reaper” can cut the hardest pavers made and requires little water.. 300mm version suits low h.p.

We have built the blade using internationally proven ISO 9001 manufacturing quality standards for reliability and consistency. This is a professional performance diamond blade for a tough job.
