“Hungry Gannet ” low noise clay paver and brick blade

As a paving contractor specialising in cobble and concrete work, you may have only an occasional need to cut clay pavers with wet cutting masonry and brick saws.

Clay pavers are a very different material containing few if any abrasive materials that help keep blades sharp. In other words your concrete cobble blade won't cut the mustard for long.

“Hungry Gannet” is a very well established clay paver blade used by pros all over the country to complement their cobble laying activities.

A very low noise, fast cutting, and economically priced blade, was developed with this profile in mind.

General bricklayer/builder/paver contractors will appreciate the versatility of “Hungry Gannet” in a broad range of clay and other low abrasion materials which are difficult to cut.

With the latest sound reduction technology incorporated, “Hungry Gannet “ will not invade the calm of residents in built up areas, or drive your OSH man to distraction.
