“Desert Torpedo ” Pro dry cutting turbo hard bricks

Bricklayers often like to use lightweight electric drop saws (metal cut off saws) for cutting bricks up on the scaffolding.

These metal cut off saws have to be run dry because they are not designed for water cooled blades.

Many bricks from overseas, in particular, are very hard, and need a first class dry cutter to cut the bricks quickly.

“Desert Torpedo” is an ISO 9001 quality consistent, special dry cutting turbo style of blade for just this kind of application.

Naturally this blade can also be used wet on a masonry saw for longer life, or dry if needed.
