“Orange Spifflicator” tough power cutoff saw blade for dense cured reinforced concretes

Reinforced cured concretes pose quite a challenge for concrete cutters. Often they have limited power, the concrete has super hard aggregate, and the steel is tough to cut.

The “ Orange Spifflicator “ is intended to bring the task under control by bringing top performing diamond and bond to the job.

This I.S.O. 9001 quality lazer welded blade utilises good design to ensure most tough concretes on most power cutters, 90ccs and over, can be cut with a minimum of time and effort.

The safety of the operator is paramount and dictates the use of tough temperature resistant lazer welding of the segment joints at about 1600 degrees C.

This blade will get the job done efficiently and safely. A fine choice.
