“Jaguar” wet/dry general purpose blade

Paving contractors and “Infrastructure” pros frequently use smaller h.p. saws up to 10 KW. to cut smaller asphalt and concrete jobs for repairs and restoration.

Often water is expensive to get to the site resulting in the need for a dry cutting capable blade.

“Jaguar” utilises a carefully balanced wear resistant wet/dry high technology bond to bring contractors good allround asphalt and concrete cutting costs at a reasonable price. Balanced for 50/50 cutting asphalt and concrete “Jaguar” has proved very popular.

“Jaguar” is engineered to be as tough as possible. Use dry, with care, when necessary.

ISO 9001 quality ensures you will be consistently satisfied with this useful blade.
