“ Dark Laser +” economical, flexible, tough - asphalt and occasional concrete blade

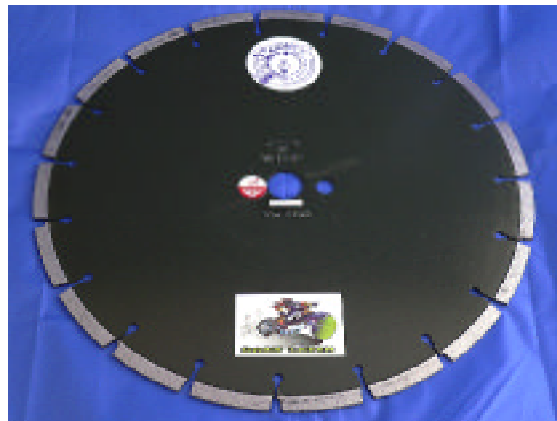

Asphalt saws come in a wide variety, so do chipseals, asphalts, hotmixes etc.

Many “ Utilities” contractors have wanted more economical diamond blades for cutting asphalts with occasional bits of concrete kerb, pipe and footpaths . “ Dark Laser + ” answers this call and provides an excellent cutting solution on most small slab saws and power cutters. “ Dark Laser + “ is a development of our very low priced, highly successful “ Dark Laser “ for those contractors wanting a longer life tool but sensibly low price.

Hard and medium hard aggregate road and footpath asphalts, chipseals etc , as well as paths, kerbs, pavers, and driveways, can easily be cut with power cut off saws from 60ccs up, and small slab saws up to 18 h.p. “ Dark laser + “ has special core protection to reduce undercutting damage from cutting into the sub base.

A special wear resistant heat conducting bond, and carefully selected diamonds, work together to provide excellent cutting rates in a wide variety of street conditions, on typical small saws, with or without water (when water is uneconomic to supply)

Double quality inspection assures consistency coupled with safety to reduce overall costs.

“ Working safer working Smarter”
