

HYPER BLADES

DESIGN PHILOSOPHY

Decades of diamond saw blade use, by millions of users all over the world, has confirmed one vital fact. "There is no such thing as a really efficient general purpose blade for all materials, all machines, and all conditions"

Often requested, this elusive tool remains as rare as ever. Instead, diamond saw blade design engineers have discovered different ways of yielding maximum cutting rates and tool life, from custom developed blades for various operations. Machine horsepower and type, material composition, budget, speed of cut preferences, and many other factors are taken into account when configuring blades.

The amazing central component is man made diamond. Synthesised in modern factories, using secret production facilities, diamond is grown into crystals which can be consistent in shape, toughness and processing damage resistance. Each tooth a marvel of hardness, in it's own right capable of cleaving the hardest concrete or stone.

We aim to lower your costs through shared experience and teamwork.

"Green Weasle" HARD BRICKS, CLAY PRODUCT, GRANITE

Numerous hard and extra hard clay products need to be cut dry, not necessarily because they can't be cut wet, but rather because dust is often easier to deal with than clay laden spray.

"Green Weasle's" low noise design has greatly improved brick, paver and terazzo cutting. Guaranteed to cut through hard bricks and other clay products without the need for continuous sharpening, this low noise technology sets the standards.

The serrated low frictional heat diamond rim, coupled with low noise technology and aggressive diamond teeth, creates fast economical cutting of hard clay materials, including hard brick, clay pavers and clay block.

A special diamond configuration, efficient cuttings ejection design, and our unique low friction super bond, deliver faster cutting than your usual blade, and yet yields long life. So for high speed, low noise durable cutting, and value for money "Green Weasle" is difficult to beat.

What's more this winner is guaranteed to give more flexible cutting than your wet only blade, or, we'll credit any other brick saw blade purchase from us with the amount you paid. Considering our extensive range of highly developed blades, that is a great proposition.

From a safety stand point it is important to know that this blade is furnace in one piece for operational safety. All important under New Zealand's tough health and safety laws. It is manufactured to strict I.S.O.9001 quality standards unlike many other brands.

To be clear. This is very likely to be the easiest, safest, best value brick-clay product blade you have ever purchased. Especially so with low powered Australian brick saws, drop saws, and harder than usual clay products.

This flexible blade is available at a sensible price, guaranteed against faulty workmanship, and available for almost any 350mm (14") saw.
